

Flag simulator project

Drafted 2025, April 23rd

An improvement over Krikenoid/FlagWaver

The aim of this project is to be the ultimate flag simulator, one where you can do anything you would want to do with a flag. If there is something missing here, please suggest it.

Features

1. Featured flag (default flag upon starting program on certain days)
May 5th: Flag of Mexico
August 24th: Flag of Ukraine
2. Flag physics
3. Flag direction
4. Wind direction
5. Wind control
6. Different backgrounds
7. Background videos
8. Export
9. Embed into a webpage
10. Database of flags
11. Upload custom flags
12. Pennants
13. Information on each flag
14. FlagW file (waving flag data file)
15. Flag burning
16. Information on religious flags
17. Flag tearing
18. Half mast
19. Raising/lowering
20. Customizable flag poles
21. Flag poles
22. SVG, PNG, JPEG, GIF, TIFF, BMP, WEBP, NETP, ICO, GIF_C200,
among other supported formats
23. Various buttons
24. Ability to send an army to take down the flag
25. Offline functionality

26. Rain and weather effects
27. Play audio (national anthems, and anthem library)
28. Simulate real weather (with weather services, and data files for weather events)
29. Flag construction mode
30. Flag folding
31. Lighting, lighting modes
32. Shine a light
33. Flashlight (movable with cursor/finger)
34. Customizable flashlight, different light colors, sizes, strengths of light
35. Flag weaving
36. Buy an actual flag (based on the one shown)
37. VIAF flag
38. Default flag
39. Homepage
40. Fire arrows
41. Other items to throw
42. Flag Emoji mode
43. Flag Emoji import
44. Flag search (search for a flag, Emojis also work as a search option)
45. User interface skins
46. Censorship modes for hate flags, Socialist/Communist flags, terrorist flags, etc
47. Age rating
48. Desktop application (with ports in Python, Java, C, and Rust)
49. Web application (with ports in Ruby, JavaScript, PHP, and WebAssembly)
50. Mobile application (with ports in Java, Kotlin, Swift, and C)
51. Flag text and copy text from flag
52. ASCII mode, with text color toggle
53. Creating large flags (up to worlds largest)
54. Size limit: whatever your system can handle (even 1,000,000m by 1,000,000m would be allowed) theoretical end at 9,223,372,036,854,775,807 (2^{64}) square pixels
55. Flag code dictionary
56. Flag creator: Your own flag (built-in editor) add description, colors, shapes, graphics, text mode, description, and flag code
57. Color modes: monochrome, 4 bit, 5 bit, 6 bit, 7 bit, 8 bit, 12 bit, 16 bit, 24 bit, 32 bit, 48 bit, 64 bit

- 58. Filters
- 59. Slideshow mode
- 60. Customize the area around the flag pole
- 61. Multiple flag poles
- 62. Flag pole size
- 63. Flag pole material (metal, wood, etc.)
- 64. Flag pole material download
- 65. Dimensional modes: 2D, 3D, 4D
- 66. Scissors, knives, and swords
- 67. Acid raid effect
- 68. Fun facts about Vexillology in the UI
- 69. Accessories menu and the ability to import new ones (built-in: scissors, knives, swords, fire arrows, flashlight)
- 70. Accessory files: a specialized data file for the project
- 71. Gun accessory will be included separately, and will not be built-in, to keep the main program more friendly to a wider audience (although the flag of Mozambique will still be built in, despite having a gun on it)
- 72. Flag transparency/opacity level
- 73. **Your ideas here:**
